- I began studying Software
- Engineering in 2020 at Tishreen
- University in the city of Latakia in Syria

CAREER OBJECTIVE

I'm an app developer using Flutter and Dart, I thrive on the excitement of bringing innovative ideas to life through mobile applications. My passion for Flutter development stems from my deep-rooted love for problem-solving and creative expression. I'm committed to continuous learning and growth, constantly seeking out new technologies and best practices to enhance my skills. My goal is to help you succeed in your plans; I am excited about the prospect of collaborating with a team of talented professionals who share my passion for programming.

WORK EXPERIENCE

Flutter Developer

May 2023 - Jun 2024 / Remote

2023-2024

- I started working remotely with some people about a year ago to develop some projects such as electronic store applications, so my responsibilities were designing the interfaces and connecting them to the server through API links.
- I also worked on some personal projects on my own.

My projects

• **Electronic Selling System (Apis-Getx-MVC-Firebase)**

Through this application, you can choose the language of your country and buy electronic tools through it, which allows you to search for the product you want and many other features.

Delivery app link : <https://github.com/wajihhawari/Ecommerce-App-Delivery.git>

Admin app link : <https://github.com/wajihhawari/Ecommerce-App-Admin.git>

• **Purchasing Medicines (Apis-Providers-MVC)**

Through this application, you do not need to go to a pharmacy to buy your medicine from your home and many other features.

App link : <https://github.com/wajihhawari/Purchasing-Medicines.git>

• **Movies App (Apis-Stateless&StateFull-MVC)**

Through this application, you can view the highest-rated films, watch a short overview of any film, and you can play this film through the rating and search for your favorite films. Let us learn more about this amazing application.

App link : <https://github.com/wajihhawari/Movies-App.git>

• **My Location App (Maps-Cubit-API)**

Through this application, you can display your current location on the map. There is a city that you will go to by writing its name and it will appear on the map with the distance you need. There are also features.

App link : <https://github.com/wajihhawari/Location-App.git>

• **My News App (Free API)**

Discover the latest exclusive news related to all sports, health and economic fields... through this simple application.

App link : <https://github.com/wajihhawari/News-App.git>

• **Ecommerce App With Firebase Backend (GetX-Firebase-CloudStorage)**

clothing household basics This application contains all categories of items, from electrical and electronic tools, and everything you might need. Get it with ease through this comprehensive application.
